

OYSTER COUNTING MACHINE

Accurate, flexible, and suitable for high capacity.

Our advanced oyster counting machine has been specially developed for accurate counting of oysters, with a design that guarantees reliability and flexibility. The machine is equipped with two conveyor belts, enabling controlled product feed and significantly increasing counting precision. The discharge belt is equipped with compartments that move the required numbers by one step at a time.

Thanks to the adjustable parameters, the machine can be easily adapted to different product sizes and desired quantities. This makes the system suitable for a wide range of applications, from counting smaller batches to processing large volumes.

For bulk applications, the machine can also be used at high capacity without compromising accuracy. This makes it an ideal solution for both semi-automatic and automated processing lines within the shellfish industry.

seafood solutions

Developed by
Murre Technologies

Cremer Speciaalmaschinen B.V.

Cremer provides counting and packaging solutions worldwide for various industries, with a strong focus on quality, speed, and service. The oyster counting machine was developed in close collaboration with Cremer to fully meet specific customer requirements.

Specifications

Machine	
NAME	Oyster counting machine
Specifications	
NUMBER OF PIECES	Adjustable
LENGTH	2.400 mm
WIDTH	2.100 mm
HEIGHT	1.600 mm
